

MOHAMMED AL-QURAINI

AI-Native Software Developer | Production AI Systems, SQL, and End-to-End Product Delivery | 7 Years

alquraini.dev@gmail.com | +968 7711 3828 | linkedin.com/in/mohammed-al-quraini | github.com/moasq | Muscat, Oman

PROFESSIONAL SUMMARY

AI-native software developer with 7 years building production services, full-stack products, and practical AI systems. Built agent workflows with validation and human review, PostgreSQL-backed services, and end-to-end product features. Recent work includes shipped AI products, workflow automation, and reliable delivery from idea through production.

TECHNICAL SKILLS

AI Systems: LangGraph, Eino (Go), retrieval-augmented generation (RAG), pgvector, tool calling, validation workflows, human-in-the-loop review

Backend & Data: Golang, Python, FastAPI, RESTful APIs, PostgreSQL, Redis, SQL query optimization, webhook integrations

Product Engineering: TypeScript, React, Next.js, Angular, API-backed product features, end-to-end delivery

Cloud & Quality: GCP, Docker, Kubernetes, CI/CD, Terraform, automated testing, production monitoring

PROFESSIONAL EXPERIENCE

Software Engineer (Backend / Web Services) | Independent / Contract

Jan 2025 – Present

Remote

- Shipped a production LLM agent system for three Gulf clients, combining Golang, Python, LangGraph, Eino, dual OCR, validation, human approval, and posting to Xero, NetSuite, and QuickBooks for 2,000-3,000 invoices/month.
- Built duplicate and fraud detection with hybrid retrieval: BM25, pgvector semantic search, and Voyage reranking caught OCR-drifted near-duplicates that exact-match PostgreSQL rules missed; cut client AP cost about 70% with LLM spend held to \$9-12/month.
- Built a production MCP server wrapping Xero, NetSuite, and QuickBooks APIs, centralizing the OAuth2 token lifecycle, allowlisted typed tools, human-approved ledger writes, and per-call audit logging.

Software Engineer (Backend / Cloud) | Oman Real

Feb 2024 – Present

Muscat, Oman (Hybrid)

- Developed Golang backend services serving 200,000 users through RESTful APIs; reduced database query latency 40% using Redis caching and PostgreSQL index optimization.
- Integrated Paymob, Apple Pay, and Stripe payment workflows with webhook-driven processing and idempotent handlers for reliable production transactions.
- Integrated maps through backend APIs, supporting location-based property discovery and map-driven user workflows.
- Designed GitLab CI/CD pipelines for automated Docker builds and zero-downtime GCP deployments, operating services on Kubernetes with Prometheus and Grafana monitoring.

Software Engineer (Full Stack / Cloud) | Ticket Travel & Tourism

Jul 2023 – Feb 2024

Muscat, Oman

- Created a 2023 AI travel-plan workflow using **LangChain** document chunking and **RAG** over a **ClickUp**-synced plan catalog, with inquiry routing, draft itineraries, and human approval before customer emails were sent.
- Shipped **Angular** and **TypeScript** interfaces over **Golang** services, deployed as **Docker** microservices on **GCP** with **Terraform**, reducing infrastructure cost **30%**.

Software Developer | Altec LLC (Contract)

Dec 2022 – Jun 2023

Alabama, USA (Remote)

- Built iOS applications using **SwiftUI** with **MVVM**, **Combine**, and **Core Data** for structured local persistence, delivering features that increased user engagement **25%**.
- Built **Spring Boot** services for mobile products, containerized with **Docker** and deployed on **Kubernetes** alongside SwiftUI application development.

Software Engineer | JPMorgan Chase, eBay (Contract)

Mar 2021 – Nov 2022

Chicago, IL (Hybrid), New York, NY (Remote)

- Developed secure financial and marketplace features, including biometric authentication, encryption protocols, **SOC2** compliance, and backend microservices work with **99.9%** crash-free sessions.
- Built **Jenkins** and **SonarQube CI/CD** pipelines for automated testing and deployment; contributed to backend microservices on eBay's high-traffic marketplace platform.

Full Stack Developer | Bizzie Co. / Knowticed

May 2019 – Dec 2020

Miami, FL (Remote)

- Designed cross-platform applications in Flutter, Swift, and Kotlin with **Golang** and **Node.js** microservices, scaling to **3,000+ users** in the first month with zero downtime.
- Built backend services with **RESTful APIs**, **Firebase** integration, cloud data storage, and MVC and Observer patterns.

PROJECTS

- Oratori.app: Shipped an AI speech-coach iOS product using speech recognition, prosody analysis, and multi-model scoring for practical feedback on spoken delivery.
- production-saas-starter: Open-source **Go** and **Next.js** B2B starter with JWT, SSO, multi-tenant RBAC, and security middleware; **527 GitHub stars**.
- Nanowave: Open-source CLI that generates, compiles, and runs SwiftUI applications from natural-language prompts using AI-assisted development workflows.

EDUCATION

BS in Computer Engineering, Cleveland State University, Cleveland, OH (Sep 2017 – May 2021)
